

HONEST QUESTION

**How many job-board
tabs do you have open
right now?**

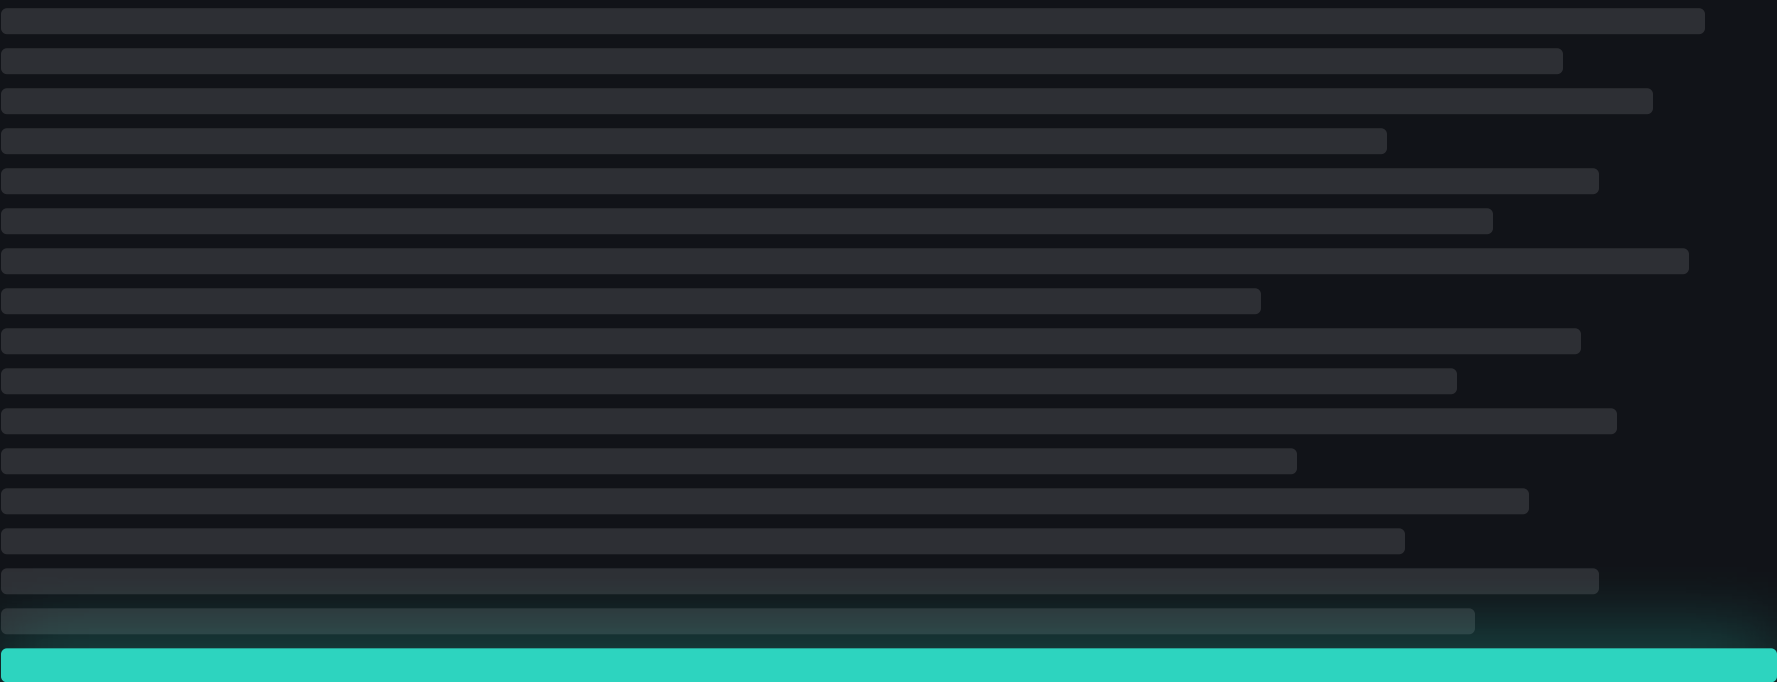

This is what job hunting looks like.

Seven tabs, one spreadsheet, four CV versions and **no idea what's actually working.**

THE REAL PROBLEM

Your next job is already
posted.
It's on page 40.

↑ the one that actually fit you

If an app only scores the page
you're looking at, the best match
stays buried purely because it
showed up late in the feed.

Rank **the whole corpus**, before paginating.

01 **Ingest**
Public job boards + company ATS portals

02 **Deduplicate**
Stable identity + content hash

03 **Pre-rank with pgvector**
Semantic search across the complete corpus

04 **Overlap skills**
A cheap, structured signal

05 **Score with an LLM only where it pays**
Tiered and cached, to keep cost proportional

THE RESULT

A shortlist that actually fits.

DISCOVER · RANKED BY MATCH		
MATCH	ROLE	COMPANY
94%	Backend Engineer · Python	Northwind Labs
91%	Platform Engineer	Vela Systems
88%	Backend Developer · FastAPI	Harbor & Finch
85%	Data Platform Engineer	Kite Analytics
82%	Software Engineer · Remote	Atlas Remote

Every score comes with its reasoning: what matched, what didn't, and which signal wasn't available.

Not just a search box. The whole process.

- Application tracking through interview and offer
- CVs and cover letters tailored per role
- Interview preparation grounded in company context
- Professional contacts and outreach messages
- Analytics on what is and isn't working
- Automatic closure of roles that no longer exist

Applying is the easy part. Figuring out what's worth applying to is the actual work.

NEW THIS WEEK

A job posting isn't the only door.

OPPORTUNITIES · CONFERENCES, CFPS AND PROGRAMS		
OPPORTUNITY	CLOSES	COST
CFP · Python conference	Sep 15	Funded
Summer school · Distributed systems	Aug 28	Free
Regional data conference	Oct 3	Likely paid
CFP · Infrastructure track	Sep 21	Free

Filter by topic, country and deadline. The cost label is inferred **even when the source publishes no fee.**

HIRESENSE

Open source. Self-hosted. Yours.

Your CV, your salary expectations
and your application history
shouldn't live on another
company's server.

MIT

FastAPI

Angular

PostgreSQL + pgvector

Docker
